

YUVARAJ M

Data Analyst

Chennai, Tamil Nadu, India • 9600801760 • yuvarajyuv83@gmail.com • github.com/yuvarajm-uv

PROFESSIONAL SUMMARY

Detail-oriented Research Analyst with 2+ years of experience in financial data analysis, validation, and reporting, transitioning into a Data Analyst role. Proven track record of handling large-scale financial datasets and delivering structured business reports using Excel. Independently upskilled in SQL, Python, and Power BI through hands-on projects spanning financial, healthcare, and AI domains. Adept at translating raw data into actionable insights and building end-to-end analytics solutions — from star schema design to interactive dashboards.

TECHNICAL SKILLS

Data Analysis & Reporting: Data Cleaning, Validation, Trend Analysis, Reconciliation, Stakeholder Reporting

Tools & Platforms: Power BI (DAX, Data Modeling, Dashboard Development), Excel (Pivot Tables, VLOOKUP, Advanced Formulas)

Programming & Query: SQL (Joins, Aggregations, Subqueries, Group By, CTEs), Python (Pandas, NumPy — Data Cleaning, EDA)

Data Architecture: Star Schema Design, SQL Server, Dimensional Modeling, Fact & Dimension Tables

PROFESSIONAL EXPERIENCE

Research Analyst | Exchange Data International

July 2023 – October 2025

- Analyzed 100,000+ financial records monthly covering dividends and derivatives — building core data analyst competencies in large-scale data handling, validation, and structured reporting.
- Collected, cleaned, and validated data from multiple sources, maintaining 98%+ accuracy across large datasets through systematic reconciliation and cross-verification.
- Built Excel-based dashboards and trackers to monitor financial trends and KPIs, reducing manual reporting time by ~30% — transitioning toward tool-driven, automated reporting.
- Performed data reconciliation across datasets, identifying and resolving discrepancies to ensure consistency — directly analogous to data quality workflows in analytical roles.
- Delivered weekly and monthly structured reports to 5+ stakeholders, translating raw financial data into clear, decision-ready insights.
- Applied data analyst thinking to research workflows: segmenting data by market, instrument type, and date range to surface patterns and anomalies in financial records.

PROFESSIONAL PROJECTS

Dividend Record Date & Pay Date Tracker | Excel | Exchange Data International

- Collected and analyzed dividend data including record dates and pay dates by researching and extracting information from multiple financial websites and official sources.
- Maintained structured Excel records for large volumes of dividend entries, ensuring accuracy and consistency across datasets through regular validation and cross-verification.
- Performed data reconciliation to identify and resolve discrepancies between source websites and internal records, maintaining high data integrity.
- Delivered periodic reports summarizing dividend schedules and trends to support stakeholder decision-making.

Derivatives Data Management — Options & Futures | Excel | Exchange Data International

- Tracked and maintained derivatives data across 20+ global markets covering Options and Futures instruments, ensuring up-to-date and accurate records.
- Sourced market-specific data from multiple financial platforms and websites, standardizing it into structured Excel formats for reporting and analysis.
- Validated derivatives records against source data to detect inconsistencies and ensure completeness across all covered markets.

PERSONAL PROJECTS

India Trade Analytics Dashboard | *Power BI | SQL Server | Star Schema*

- Built an end-to-end trade analytics pipeline on India's import/export data sourced from the World Bank, RBI, and Ministry of Commerce — producing a 978-row master CSV spanning Annual Summary, Commodity Breakdown, and Partner Breakdown datasets.
- Designed a SQL Server star schema with 3 dimension tables (Dim_Date, Dim_Commodity, Dim_TradingPartner) and 3 fact tables (Fact_AnnualTrade, Fact_CommodityTrade, Fact_PartnerTrade), along with 6 Power BI-ready analytical views.
- Developed a 6-page Power BI dashboard using a dark theme with India flag-inspired color palette, covering Trade Overview, Commodity Analysis, Trading Partner Analysis, Time Trends, and Export/Import Deep Dive pages.
- Surfaced key insights: Engineering goods and petroleum products are top exports; USA, China, and UAE dominate trade flows; India's exports grew ~3x from 2000s to 2020s while imports grew ~4x in the same period.
- Implemented advanced SQL patterns including decade-level trend views, data validation checks, and PERSISTED computed columns; resolved DAX reserved keyword conflicts and Power BI decade-column formatting issues.

AI Jobs Market Analytics Dashboard | *Power BI | SQL Server | Star Schema*

- Built an end-to-end analytics pipeline on 1,500+ global AI job postings across 14 countries, designing a SQL Server star schema with 9 dimension tables and 1 fact table to model salary, demand, and hiring patterns.
- Developed a multi-page Power BI dashboard covering Job Market Overview and Experience, Education & Industry — with 6-slicer filter bars and dynamic cross-page navigation.
- Created DAX measures for key KPIs including AVG Salary (\$194.89K), AI Salary Premium (10.9%), Senior Role %, and LLM Role %, along with salary tier and demand score calculations.
- Identified that AI Engineering dominates hiring at 49% of postings, Hybrid leads work models at 45.73%, and Big Tech pays 42% more than startups (\$238K vs \$168K).
- Implemented star schema design decisions including surrogate key format (YYYYMM for dates), PERSISTED computed columns, ordinal sort columns for correct Power BI ordering, and boolean flags (is_senior, is_llm_role, is_remote_friendly).

E-Commerce Sales Analysis | *SQL | MySQL*

- Designed and queried a relational e-commerce schema covering orders, customers, products, and payments using MySQL with real-world Indian market scenarios.
- Wrote complex SQL queries using JOINS, GROUP BY, CASE WHEN, subqueries, and aggregate functions to extract sales trends and customer behaviour insights.
- Built views and summary queries to identify top-selling categories, high-value customers, and revenue patterns across regions.
- Practised end-to-end data extraction and transformation logic to simulate analyst-level reporting workflows.

IPL Analytics Dashboard (2008–2025) | *Power BI | SQL Server | Star Schema*

- Built an end-to-end analytics pipeline on ball-by-ball IPL data (2008–2025), designing a SQL Server star schema with fact and dimension tables for matches, deliveries, players, and teams.
- Developed a multi-page Power BI dashboard covering Batting Analysis, Bowling Analysis, Team Performance, and Summary KPIs — enabling cross-page navigation and dynamic filtering by team and season.
- Created DAX measures for key batting metrics (strike rate, run rate by over phase, batter runs by position group) and bowling metrics (economy by over phase, dot ball %, death over wickets).
- Identified top performers across all seasons: V Kohli (8,157 runs), YS Chahal (265 wickets), CH Gayle (377 sixes), and Gujarat Titans (highest team run rate of 9.03).
- Visualized batting run rate trends (2009–2023), team wins all-time, wicket type distribution, and chasing team win % (54%) to surface strategic match insights.

KEY STRENGTHS

-
- Strong background in financial data handling — dividends and derivatives across 20+ global markets.
 - Proven ability to maintain 98%+ data accuracy through structured validation and reconciliation.
 - Self-driven upskilling in SQL, Python, and Power BI through independent hands-on projects.
 - Skilled at translating data findings into clear, actionable reports for stakeholders at all levels.
 - Detail-oriented with consistent focus on data quality, documentation, and process improvement.

EDUCATION

B.E. Computer Science & Engineering

Ganadipathy Tulsi's Engineering College, Vellore • Anna University

2013 – 2017
